

COMBINATION

4040s OD Carbon - 4060s OD Carbon
4060s OD Macrolite - 4060f OD Macrolite/Carbon

Kinetico's combination system combines two, dual function systems, essentially making it four systems in one. Kinetico filters are fitted with a non-electric control valve to provide a continuous flow of filtered water.

It provides a continuous availability of soft and filtered water. This eliminates the need for separate systems, saving money and space. It also simplifies maintenance.

Since the media is contained in separate tanks, it can be replaced easily without disturbing or dismantling other parts of the system.

- Dual function system - particle filtration and water softening
- Easy installation and maintenance
- Continuous availability

Over 40 Years Experience

Non-Electric

Twin Tank Design

Metered Regeneration

Soft Water Rinse

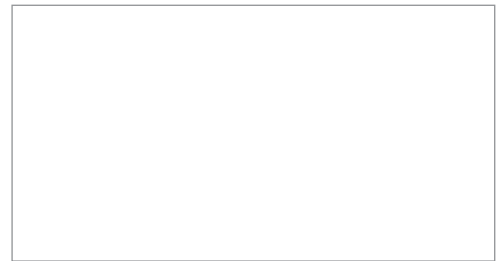

Countercurrent Regeneration

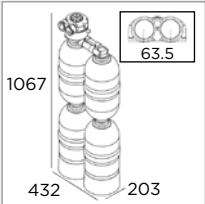

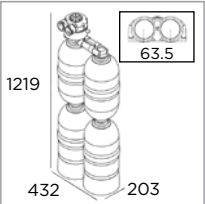

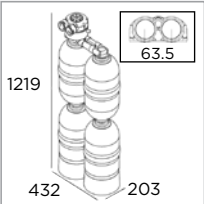

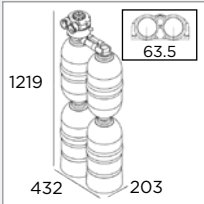

Low Salt Consumption
